employment history

Web Developer, Cisco Systems   Columbia, MD (Mar. 2014 - Present)

Working on a small team, I design and maintain and deploy internal and external web sites (mostly rails apps). Additionally I provide graphic design & branding services.

- **ClamAV.net redesign (full stack).** To meet the goals of a fast, easy-to-update website, I used the Jekyll templating system combined with a minimal Sinatra application to process file submissions uploaded by users. I also created a a an updated logo and brand identity to appeal to current design trends.

- **Snort.org (enhancements).** I work on a team to maintain all parts of this traditional Rails application, from bugs in search indexing to creating an FAQ feature rendering and auto-updating content from Snort's github repository.

- **Bug Tracking Application (front end).** I designed and developed an Ember App to provide a responsive and beautiful way for users to interact with Rails API.

previous

Designer, MRA/Sardi Design   Baltimore, MD (2012 - 2014)

- **Graphic Design,** including presentations, illustrative and architectural drawings, diagrams, renderings and infographics.

- **Basic Web Design & Social Media,** including a temporary MRA webpage, worked as part of a team to overhual two company portfolio websites

- **Research/Budgets** to support sponsorship, immersive technology integration and destination strategy designs.
